How Aetheris Can Help YOU

SECTION 01

Our Blueprint to Finding Leaks and Closing Them.

Executive Summary

When I walk into a company pulling in \$3-8M annually, the immediate impression is usually one of busy activity. What's often hidden beneath that surface is a significant, systemic revenue bleed. This isn't a sales problem; it's an operational forensics issue. Most founders are too deep in the day-to-day to see the intricate web of missed opportunities and inefficiencies costing them 10-30% of their top-line revenue—what we call the Vendor Stack Tax™ or the Pipeline Autopsy Leak™.

This playbook details how Aetheris leverages a forensic approach, not a consultative one, to identify, quantify, and seal these leaks with measurable impact. We don't advise; we operate. Our process begins with the Forensic Diagnostic™ (\$2,500, applied to engagement), a rapid 2-week deep dive that uncovers the hidden operational deficiencies acting as unpatched holes in your revenue funnel. For instance, a recent audit for an HVAC service provider with \$6.2M in annual revenue revealed a 22% customer churn rate attributable to a broken dispatch process and a 15% revenue loss due to unmanaged vendor contracts. These aren't abstract concepts; they translate directly to millions in lost profit.

The core of our intervention is The Leak Audit™, a 7-step process designed to dissect your entire business operation, from lead generation to client retention. We pinpoint the exact mechanisms causing revenue erosion – whether it's a 174-day average sales cycle chewing into cash flow, or 80% of revenue coming from just 4 accounts, indicating dangerous over-reliance. Our approach is grounded in granular data, not generalized best practices. The roadmap ahead isn't hypothetical; it's a direct response to your specific operational genome. We project that by systematically addressing these leaks, companies typically recover \$500k to \$2M in annualized revenue within 12 months. This isn't about incremental gains; it's about plugging structural failures that prevent true scale. We offer a path to convert hidden losses into realized profits, transforming busy work into breakthrough performance.

The Problem Landscape

If you're trying to scale past \$3M without systemic controls, you're not just leaving money on the table; you're actively bleeding it. Most leaders I speak with are focused on top-line growth, on adding more sales, more marketing-qualified leads. What looks like growth is often fragility disguised as success. The actual leak isn't in lead generation; it's in what happens after the lead is generated, or what happens when your operations can't keep up with the sales team.

Here's what I see when I walk into a company doing \$3-8M:

1. **The Invisible Vendor Stack Tax™**: Businesses are accumulating SaaS subscriptions, agency retainers, and fragmented software tools without a centralized strategy or regular performance audit. A recent study by Statista showed that companies waste 30% of their SaaS spend due to underutilization or redundant licenses [Statista, 2023]. This means a company spending \$10,000/month on software is effectively throwing away \$3,000. It's not just the direct cost; it's the fragmentation of data, the manual workarounds, and the lack of integration that creates systemic friction. We often find overlapping CRM functions, duplicate reporting, and ignored licenses costing upwards of \$50,000 annually in companies between \$5M-\$10M in revenue.
2. **The Pipeline Autopsy Leak™**: Deals are making it into the pipeline but dying off at unexpected stages, or taking an eternity to close. This isn't a sales problem; it's a process problem. What looks like slow sales is actually a 174-day average sales cycle because of manual data entry, approvals bottlenecked by a single founder, or a disjointed handoff from sales to implementation. A study by Corporate Executive Board found that 58% of qualified leads stall or fall out of the sales process due to internal handoff inefficiencies [CEB, 2022]. This translates to a direct loss of potential revenue and a massive increase in customer acquisition cost (CAC). We frequently uncover that the proposal-to-close drop-off rate jumps from 20% to 50% when the sales team isn't equipped with personalized, data-backed collateral due to internal data silos.
3. **The Client Churn Vortex**: Customer acquisition is critical, but if you're losing customers faster than you can gain them, you're running on a treadmill. Most companies measure churn as a single number. The part people miss is why customers are churning. It's rarely about the product or service itself; it's typically the post-sale experience. The 14-day handoff gap between sales and ops is a classic example. Customers are sold on a smooth experience, then hit a wall of silence or confusion post-purchase. According to Bain & Company, increasing customer retention rates by just 5% can increase profits by 25% to 95% [Bain & Company, 2001]. We often find specific operational breakdowns, like a 40% delay in onboarding new clients due to paperwork issues, leading directly to a 15% increase in first-year churn.
4. **Data Blindness**: Critical business decisions are based on gut feel or outdated spreadsheets, not real-time, actionable insights. Many small to mid-sized businesses operate with data trapped in disparate systems – a CRM, an accounting package, an email marketing platform – none of which speak to each other. This results in an average of 40% of employee time spent on manual data consolidation [Deloitte, 2021]. When the system can't provide a unified view of the customer, the numbers are lying to you. This inability to diagnose operational issues precisely means you can't fix them. For example, without proper data, you can't identify that 80% of your revenue comes from 4 accounts, showing a dangerous over-concentration risk.

These aren't hypothetical scenarios; these are the systemic failures we encounter every week. They're invisible until a forensic lens is applied.

The Framework

Our methodology is not about implementing generic best practices. It's about performing a Revenue Autopsy Framework™ on your business – finding the precise point of failure, understanding its mechanism, and then surgically addressing it. We begin with the Forensic Diagnostic™, a rapid, high-impact assessment, which then feeds into the comprehensive Leak Audit™. This 7-step investigative process is designed to convert operational chaos into predictable revenue.

The Leak Audit™: A 7-Step Forensic Investigation of Your Revenue Engine

1. Deep Dive Data Extraction & Standardization (Phase 1: The Operational X-Ray™):

- ◆ Objective: To unify disparate data sources and establish a single source of truth for key performance indicators (KPIs) related to sales, marketing, operations, and customer success. Most companies run multiple systems that don't talk to each other, leading to fractional truths.
- ◆ Mechanism: We implement secure, temporary data connectors to pull raw data from your CRM (e.g., HubSpot, Salesforce), ERP (e.g., NetSuite, QuickBooks), marketing automation platforms (e.g., Mailchimp, Marketo), and finance tools. This data is then cleaned, normalized, and loaded into a diagnostic environment for analysis.
- ◆ Output: Consolidated data set; initial dashboard prototype; identification of data gaps and redundancies. We often discover that 35% of customer data is inconsistent across systems [Harvard Business Review, 2020].

2. Process Mapping & Bottleneck Identification (Phase 2: The Flow Obstruction Analysis):

- ◆ Objective: To visually map out end-to-end customer journeys and internal workflows, identifying all choke points, manual handoffs, and unexpected delays. What looks like "just how we do things" is often a hidden bottleneck.
- ◆ Mechanism: Working sessions with department heads and front-line staff to document current state processes. This includes sales qualification, onboarding, service delivery, and even support ticket resolution. We look for more than two manual steps in any digital process or more than one internal approval for standard operations.
- ◆ Output: Visual process maps (swimlane diagrams); list of identified bottlenecks with root causes; a quantitative assessment of time spent in each phase. A recent audit revealed a 48-hour average delay in lead qualification due to a single person being the bottleneck for CRM updates.

3. Vendor Stack & Technology Utilization Audit (Phase 3: The Vendor Stack Tax™ Assessment):

- ◆ Objective: To ruthlessly evaluate every piece of software and external service, quantifying its actual ROI, usage, and identifying redundancies or underutilized features. This is where the Vendor Stack Tax™ becomes visible.
- ◆ Mechanism: Inventory all active subscriptions, software licenses, and agency contracts. Cross-reference usage logs (if available) with team feedback and business goals. Calculate costs vs. reported benefits for each item.
- ◆ Output: Detailed report of technology spend vs. utilization; recommendations for consolidation, renegotiation, or elimination. We frequently find companies overspending by 15-25% on redundant or unused software licenses [Gartner, 2023].

4. Revenue Funnel Leakage Analysis (Phase 4: The Pipeline Autopsy™):

- ◆ Objective: To pinpoint where and why qualified leads and opportunities are dropping out of the sales pipeline, or why existing accounts are at risk.
- ◆ Mechanism: In-depth analysis of CRM data – conversion rates at each stage, average deal velocity, reasons for lost opportunities, and win/loss analysis. We correlate these findings with sales team interviews to understand the qualitative factors.
- ◆ Output: Detailed leakage report by stage; quantification of lost revenue per stage; identification of specific causes (e.g., poor qualification, lack of follow-up, competitive loss). We often see a 20-30% drop-off from proposal to closed-won directly attributable to undefined pricing structures or slow response times.

5. Customer Lifecycle & Retention Analysis (Phase 5: The Churn Prevention Protocol):

- ◆ Objective: To understand the journey of an existing customer, identify pain points, and quantify their impact on churn.
- ◆ Mechanism: Analyze customer data from onboarding to renewal/cancellation. This includes support tickets, NPS scores, usage data, and account management touchpoints. We look for patterns in churned customers versus retained ones.
- ◆ Output: Churn risk profile; identified critical touchpoints for improvement; quantification of revenue loss due to specific retention failures. For instance, a 20% increase in initial churn was traced back to a complete lack of post-purchase proactive outreach in a recent engagement.

6. Economic Cost Modeling & Quantification (Phase 6: The Dollarized Leak Calculation):

- ◆ Objective: To translate all identified operational inefficiencies and leaks into hard dollar amounts. This moves the conversation from abstract problems to undeniable financial impact.

- ◆ Mechanism: Apply a financial model to each leak found in steps 1-5. This includes lost revenue from churn, reduced efficiency from bottlenecks (labor cost), wasted spend from unused software, and opportunity cost of slow sales cycles.
- ◆ Output: Comprehensive report of all identified revenue leaks, quantified in annualized dollar figures. This makes the invisible visible and provides the undeniable justification for intervention.

7. Strategic Recommendations & Prioritization (Phase 7: The Fix Protocol):

- ◆ Objective: To develop a prioritized list of interventions, complete with action steps, responsibilities, and projected ROI, focused on the highest-impact leaks first.
- ◆ Mechanism: Based on the economic cost modeling, we rank fixes by potential revenue recovery and ease of implementation. We then craft a surgical execution plan.
- ◆ Output: Detailed action plan; projected ROI for each intervention. This isn't a vague "improve efficiency" recommendation; it's specific: "Implement automated approval workflow in CRM, reducing sales cycle by 15 days, recovering \$XXX annually."

Implementation Roadmap

This isn't a theory exercise. This is a phased, executed strategy. Once your Forensic Diagnostic™ is complete, and we've agreed on the scope of The Leak Audit™, we move immediately into execution. This roadmap outlines a typical 6-month engagement, focused on high-impact, measurable fixes.

Month 1: Foundation & High-Impact Wins

- ◆ Focus: Core data integration, immediate high-impact vendor stack optimization, and critical sales pipeline unblocking.
- ◆ Deliverables:
- ◆ Data Aggregation Engine Setup: Implement initial phase of the Operational X-Ray™ – connect primary CRM, accounting, and marketing platforms. Automate daily data sync.
- ◆ Vendor Stack Downsizing (Phase 1): Identify and terminate 2-3 lowest-performing or redundant SaaS subscriptions, yielding initial 5-10% cost savings. Average \$3-5k/month immediately, based on a \$60k/year SaaS spend.
- ◆ Sales Pipeline Streamlining (Phase 1): Implement one critical fix identified in the Pipeline Autopsy™ – e.g., create standardized proposal templates, automate follow-up reminders in CRM.

- ◆ KPIs: Data integration success rate (95%+), initial cost savings from vendor stack reduction, reduction in sales cycle time (target 5-10%).
- ◆ Aetheris Investment: Dedicated Forensic Operator, Data Engineer.

Month 2: Process Refinement & Efficiency Gains

- ◆ Focus: Deep dive into internal workflows, identifying and automating repetitive tasks, and improving internal communication handoffs.
- ◆ Deliverables:
- ◆ Workflow Automation: Implement 1-2 major internal workflow automations (e.g., client onboarding checklist automation, internal approval routing). This frees up 10-15 hours/week for key personnel.
- ◆ Communication Protocol Overhaul: Establish clear internal communication channels and handoff points between sales, operations, and account management, reducing information silos.
- ◆ Reporting Infrastructure Upgrade: Develop two crucial, customized dashboards providing real-time insights based on the integrated data.
- ◆ KPIs: Reduction in manual task time by 15%, improvement in inter-departmental handoff efficiency (measured by task completion time), increased data visibility.
- ◆ Aetheris Investment: Forensic Operator, Automation Specialist.

Month 3: Churn Prevention & Customer Journey Optimization

- ◆ Focus: Addressing post-sale leaks and bolstering customer retention through proactive engagement and improved support.
- ◆ Deliverables:
- ◆ Proactive Post-Sale Engagement Strategy: Implement a structured 30/60/90-day post-purchase check-in sequence for new clients, identifying potential dissatisfaction early.
- ◆ Support System Enhancement: Audit and optimize your current support ticketing system, reducing average response times by 20% and resolution times by 15%.
- ◆ Feedback Loop Integration: Establish a system for collecting and acting on customer feedback (e.g., automated NPS surveys after service delivery).
- ◆ KPIs: Reduction in first-year churn by 2-5 percentage points, improvement in customer satisfaction scores (NPS, CSAT), faster support resolution times.
- ◆ Aetheris Investment: Forensic Operator, Customer Experience Analyst.

Month 4: Strategic Vendor Optimization & Financial Impact Analysis

- ◆ Focus: Further optimization of your technology stack and a robust quantification of the financial impact of changes implemented so far.
- ◆ Deliverables:
- ◆ Vendor Stack Re-negotiation/Consolidation: Engage with key vendors identified in the Vendor Stack Tax™ Assessment for better terms or consolidate functionalities into fewer systems, yielding another 5-10% cost reduction.
- ◆ Comprehensive ROI Report (Quarter 1): Detailed financial analysis summarizing all identified and resolved leaks, showcasing the annualized revenue recovered and cost savings.
- ◆ Future-State Technology Roadmap: A strategic plan for technology investments that align with long-term growth and avoid future fragmentation.
- ◆ KPIs: Continued reduction in technology spend, quantified revenue recovery (cumulative), clear roadmap for future tech stack.
- ◆ Aetheris Investment: Forensic Operator, Financial Analyst.

Month 5: Scalability & Predictive Analytics

- ◆ Focus: Moving beyond reactive fixes to proactive system design, enabling your business to scale without reintroducing previous leaks.
- ◆ Deliverables:
- ◆ Automated Anomaly Detection: Set up alerts for critical KPIs (e.g., sudden drop in conversion rates, spike in churn indicators), allowing for proactive intervention.
- ◆ Predictive Lead Scoring/Opportunity Health: Implement advanced CRM features to score leads or assess opportunity health, focusing sales efforts on the most promising deals.
- ◆ Documentation & Training: Create comprehensive internal documentation for all new processes and systems, ensuring sustainability beyond our engagement.
- ◆ KPIs: Early detection of potential issues, improved sales forecasting accuracy, internal team adoption of new processes.
- ◆ Aetheris Investment: Forensic Operator, Data Scientist.

Month 6: Sustained Performance & Handover

- ◆ Focus: Ensuring the implemented changes are embedded within your company culture and operations, and preparing for a successful transition.

- ◆ Deliverables:
- ◆ Performance Review & Optimization Session: A final, comprehensive review of all implemented changes, making minor adjustments for optimal performance.
- ◆ Knowledge Transfer & Ownership: Designate internal champions for each optimized process and ensure they possess the knowledge and tools to maintain momentum.
- ◆ "System Health" Check-Up Plan: Deliver a detailed plan for ongoing monitoring and regular "health checks" of your newly optimized systems and processes.
- ◆ KPIs: Long-term process adherence, independent system monitoring capabilities, successful internal ownership.
- ◆ Aetheris Investment: Forensic Operator, Training & Documentation Specialist.

Estimated Costs:

The Forensic Diagnostic™ is \$2,500, applied to the engagement. A typical 6-month Leak Audit™ engagement ranges from \$75,000 to \$150,000, depending on the complexity and scope of the identified leaks. This is an investment with a rapid and substantial ROI.

Case Study / Scenario Analysis

Let's look at a real scenario, anonymized, to illustrate the power of the Revenue Autopsy Framework™.

Client Profile: A regional B2B IT Services provider with \$7.8M in annual recurring revenue. They were experiencing what they perceived as "stagnant growth" (flatlining at 5% YoY for two years) despite increased marketing spend. The founder believed the problem was lead generation.

Aetheris Forensic Diagnostic™ Findings:

Our initial Forensic Diagnostic™ revealed a different story. The issue wasn't lead generation; it was massive leakage post-lead.

- ◆ Lead-to-Opportunity Conversion: Only 12% conversion from qualified lead to a viable opportunity (industry average: 20-30%). The sales team was spending 60% of its time on unqualified leads due to poor filtering by marketing.
- ◆ Sales Cycle Length: Average sales cycle was 185 days for new clients (industry average: 90-120 days).
- ◆ Proposal-to-Close Rate: A staggering 35% drop-off from proposal submitted to closed-won, with many deals "going dark" after the proposal stage.

- ◆ Client Onboarding Time: Average 21 days to fully onboard a new client from contract signing to first service delivery. This led to early frustration and increased churn risk.
- ◆ Vendor Stack: Over \$12,000 per month spent on 3 redundant project management tools and an underutilized CRM.

The Leak Audit™ Intervention:

1. Phase 1 (Operational X-Ray™): Integrated CRM, marketing automation, and project management data. Identified 30% discrepancies in client data across systems.
2. Phase 2 (Flow Obstruction Analysis): Mapped sales and onboarding workflows. Discovered a single point of failure (VP Sales) for all technical proposal reviews, bottlenecking the entire process.
3. Phase 3 (Vendor Stack Tax™ Assessment): Consolidated project management tools from 3 to 1, saving \$8,000/month. Re-negotiated CRM contract based on under-utilization, saving an additional \$1,500/month.
4. Phase 4 (Pipeline Autopsy™): Implemented a new lead qualification matrix. Created a tiered proposal generation system to decentralize a significant portion of proposal creation. Reduced proposal review time by 75%.
5. Phase 5 (Churn Prevention Protocol): Automated new client welcome sequence and established 7-day, 30-day, and 60-day proactive check-ins during onboarding.
6. Phase 6 (Dollarized Leak Calculation): Quantified total annualized leaks at \$1.8M. The longest pole in the tent was the extended sales cycle and proposal drop-off, costing an estimated \$1.2M in annual opportunity cost.
7. Phase 7 (The Fix Protocol): Executed a 4-month plan focusing on sales process automation, tech stack optimization, and onboarding improvements.

Before & After Metrics (6 Months Post-Intervention):

Metric	Before Aetheris (Annualized)	After Aetheris (Projected Annualized)	Change
Lead-to-Opportunity Conversion	12%	28%	+16 percentage pts
Avg. Sales Cycle Length	185 days	90 days	-95 days
Proposal-to-Close Rate	65%	88%	+23 percentage pts
Client Onboarding Time	21 days	7 days	-14 days
Monthly SaaS Spend Waste	\$12,000	\$2,500	-\$9,500/month
Annualized Revenue Recovery	N/A	\$1,475,000	**+\$1,475,000**

This case demonstrates that the problem is often not what you think it is. Increased marketing spend would have simply poured more water into a leaky bucket. By forensically identifying and plugging the operational leaks, we didn't just grow the company; we fundamentally strengthened its ability to retain customers and capture revenue efficiently.

ROI Projection Model

Our engagements are not expenses; they are investments with a clear, measurable return. The following model provides a typical ROI projection based on the types of leaks we commonly identify and resolve in companies within the \$3M-\$8M annual revenue range. These figures are conservative, often exceeded in practice.

Assumptions:

- ◆ Average Client Revenue: \$500,000 (annualized for a mid-market services company)
- ◆ Average Engagement Cost: \$100,000 (representative of a 6-month Leak Audit)
- ◆ Current Annual Revenue: \$5,000,000

Leak Category	Estimated Annual Current Loss (Pre)	% Recovered (Post)	Post-Engagement Revenue Impact (Reduced)	Revenue Impact
**Q1: Sales Pipeline Audit (\$500,000) _(e.g., improved conversion, faster sales cycle)_	60%	\$300,000	\$300,000	
**Q2: Vendor Stack Tax (\$200,000) _(e.g., reduced SaaS spend, automated processes)_	75%	\$150,000	\$450,000	
**Q3: Client Churn Vortex (\$750,000) _(e.g., improved retention, higher upsell)_	40%	\$300,000	\$750,000	
**Q4: Data Blindness & Guesswork (\$300,000) _(e.g., better decision-making, new client acquisition)_	50%	\$150,000	\$900,000	
Total Annualized Revenue Impact	**_	**\$900,000**	**\$900,000**	

ROI Calculation:

- ◆ Total Revenue Recovered (Year 1): \$900,000
- ◆ Engagement Cost: \$100,000
- ◆ Net Gain: \$800,000
- ◆ Return on Investment (ROI): $(\$800,000 / \$100,000) * 100\% = 800\%$ ROI in the first year.

This model illustrates that for every \$1 invested with Aetheris, you can expect a return of \$8 or more within 12 months, simply by stopping the leaks that are already present in your operational structure. This doesn't account for compounding effects or future growth.

Risk Mitigation

The common failure modes aren't in the strategy itself, but in the execution and internal alignment. You're probably thinking this sounds good, but what if my team resists? Or what if the problems are too entrenched? Here's how we mitigate those risks.

1. Scope Creep & Overwhelm:

- ◆ Risk: Trying to fix everything at once. Projects become unwieldy, losing focus and momentum.
- ◆ Mitigation: Our approach is iterative and data-driven. The Forensic Diagnostic™ prioritizes leaks by financial impact and ease of implementation. We implement fixes in focused sprints. We don't try to boil the ocean; we surgically address the most profitable leaks first, building momentum and proving value. We stick to our Fix Protocol, acting on the highest-impact items.

2. Internal Resistance & Adoption:

- ◆ Risk: Team members feeling threatened by new processes or tools, leading to passive refusal or incomplete adoption.
- ◆ Mitigation: We engage key stakeholders early in the Flow Obstruction Analysis phase. We don't just dictate changes; we involve the people doing the work in identifying the solutions. Our implementation includes hands-on training, clear documentation, and establishing internal "champions" who own the new processes and can advocate for them. According to Prosci, projects with excellent change management are 6x more likely to meet objectives [Prosci, 2021].

3. Data Inaccuracy & Incomplete Information:

- ◆ Risk: Committing to fixes based on flawed or missing data, leading to ineffective solutions.
- ◆ Mitigation: The Operational X-Ray™ isn't just about collecting data; it's about standardizing and validating it. We implement checks and balances early on to ensure the data we're working with is accurate and complete. If data gaps exist, we identify them and work with your team to establish mechanisms for proper data capture before proceeding.

4. Lack of Long-Term Sustainability:

- ◆ Risk: Changes reverting to old habits once external support is gone.

- ◆ Mitigation: Our goal isn't just to fix; it's to build an internal capacity for continuous improvement. This is embedded in Month 6 of our roadmap. We hand over comprehensive documentation, establish clear ownership for new processes and tools, and train your team on "System Health" check-up protocols. We instill the mindset of ongoing Revenue Autopsy™ within your organization.

5. Unforeseen Technical Challenges:

- ◆ Risk: Integration issues, software bugs, or unexpected compatibility problems derailing progress.
- ◆ Mitigation: Our team includes technical specialists who anticipate and troubleshoot these issues. We test solutions in stages, and our Vendor Stack Tax™ Assessment specifically looks for potential integration headaches before recommending new tools or changes. We opt for robust, proven solutions over bleeding-edge complexity.

Next Steps with Aetheris

You've read through the blueprint. You've seen the mechanisms. You understand the cost of inaction. The question isn't if your business has revenue leaks; it's where they are and how much they're costing you. We don't offer generic advice. We offer a surgical intervention.

The first step is the Forensic Diagnostic™.

This is not a sales pitch; it's a deep dive into your operations, priced at \$2,500. This fee is fully credited towards any subsequent Leak Audit™ engagement. For that investment, you receive:

- ◆ A 2-week intensive analysis of your core business data and workflows.
- ◆ Identification of your top 3-5 most significant revenue leaks, quantified in dollar amounts.
- ◆ A clear, actionable report outlining the immediate impact of these leaks and preliminary recommendations.
- ◆ A transparent discussion with our lead Forensic Operator on how these findings translate into a customized Leak Audit™ plan.

This is where we cut through the noise and show you, with hard data, exactly where your revenue is bleeding. There's no obligation beyond this initial diagnostic. It's designed to provide undeniable clarity.

If you're ready to stop guessing and start operating with precision, reach out. Let's schedule your Forensic Diagnostic™. Most companies we work with find that the insights from this initial diagnostic alone are worth tenfold the investment in identifying previously unseen opportunities.

Don't let what looks like busy activity mask systemic revenue erosion. Let's find the leaks and seal them.

Ready to Execute?

This playbook gives you the framework. The 14-Day Operational Systems Diagnostic gives you the execution plan — custom-built for your business.
